DETAILED ACTION

Information Disclosure Statement

The information disclosure statement filed June 1, 2010 fails to comply with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609 because it failed to include a translation for the Japanese reference. It has been placed in the application file, but the information referred to therein has not been considered as to the merits. Applicant is advised that the date of any re-submission of any item of information contained in this information disclosure statement or the submission of any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the statement, including all certification requirements for statements under 37 CFR 1.97(e). See MPEP § 609.05(a).

Allowable Subject Matter

Claims 1 and 5-30 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art does not teach or suggest a process for introducing and extracting a liquid of interest on a surface that is non-wetting with respect to the liquid of interest with the exception of localized uptake areas, such that a drop of the liquid of interest remains captive on each uptake area when the liquid of interest is extracted, and wherein at least one uptake area has an open or closed ring shape that encircles at least one working area that is *non-wetting* with respect to the liquid of interest. The prior art, including the cited

Brennan reference, teaches a ring that is non-wetting with respect to a liquid, and encircles an area that is wetting with respect to the liquid.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Yang, 20030194709, discloses a hydrophobic ring, open or closed, that surrounds an electrode to provide droplet control, wherein the electrode is wetting with respect to the droplet and the hydrophobic ring is nonwetting with respect to the droplet. Ellson et al., 6,642,061, disclose altering wetting properties of substrates.
